Overview

I added a video to the roux page. The video is stored natively and is not my product. I probably need to list its producer and source to avoid copyright issues, but I have not looked into it yet. I initially wanted to embed the video directly from YouTube. I think that will make the site easier to update in the future, however, that requires that I host the website from a server, which I am not yet ready to do. I also added a video poster by taking a screen shot of a point in the video and saving it as a .png file.

Code used

```
<div class="video-container VIDEO" id="roux-video-container">
    <video width="560" height="315" controls preload="auto" poster="images/roux_video_poster.png">
        <source src="videos/roux-video.mp4" type="video/mp4">
            Your browser does not support the video tag.
    </video>
</div> <!-- Close VIDEO -->
```

I have decided to only attach the id to the div container for readability. This way, all Class and ID definitions are in the same locations and can be easily found. I have realized I can still access the video and source elements of the container with the following code:

```
document.querySelector(".roux-video-container video source");
```

Meaning, I only need the identifiers in the div elements.

Currently, there is only one type of video file and I do not set the MIME type. In the future this might be important, but videos are such a low priority for this project that I don't think it is worth it.

Roux

A roux, from the French word for "red," is a mixture of roughly equal volumes of a starch and a liquid fat that are cooked together and then used as a thickener for liquids in soups, stews, and sauces. It's a common technique in Continental cuisine (French, Italian, et cetera), and is also used heavily in the Cajun and Creole cooking of Louisiana for thickening dishes like gumbo and étouffée.

Ingredients

- 1 part flour
- 1 part butter or other fat

Instructions

1. Over medium-high heat, melt salted butter in a saucepan.
2. Gradually whisk in ¼ cup all-purpose flour using a wooden spoon or whisk.
3. Stir constantly for at least 5 minutes until the mixture is smooth and lightly golden in color.
4. Remove the saucepan from heat and let the roux cool slightly before using it to thicken your dish.
5. Incorporate the roux into soups, stews, or sauces as needed, stirring constantly to avoid lumps.
